HIGHER SPECIALIST TRAINING IN

NEPHROLOGY
This curriculum of training in Nephrology was developed in 2012 and undergoes an annual review by Dr. Conall O Seaghdha National Specialty Director, Dr Ann O’Shaughnessy, Head of Education, Innovation & Research and by the Nephrology Training Committee. The curriculum is approved by the ICHMT.

## DOCUMENTATION OF MINIMUM REQUIREMENTS FOR TRAINING ............................................................................. 58

© Royal College of Physicians of Ireland, 2015
Introduction

Nephrology is a predominantly clinical specialty dealing with diseases of the kidneys as they affect people of all ages. Besides the pathophysiological processes involved and the physical impact of each condition, psycho-social effects must also be understood. The potential benefits and risks of specific treatments must be learned and experience gained in the multi-disciplinary approach to management of patients with kidney disease. The physician may later wish to may develop subspecialty expertise in areas such as transplantation, obstetric medicine, vasculitis, etc. so it is important that an interest in such topics can be facilitated during training.

Besides these specialty specific elements, trainees in Nephrology must also acquire certain core competencies which are essential for good medical practice. These comprise the generic components of the curriculum.

Aims

Upon satisfactory completion of specialist training in Nephrology, the doctor will be competent to undertake comprehensive medical practice in that specialty in a professional manner, unsupervised and independently and/or within a team, in keeping with the needs of the healthcare system.

Competencies at a level consistent with practice in the specialty of Nephrology will include the following:

- Patient care that is appropriate, effective and compassionate dealing with health problems and health promotion.
- Medical knowledge in the basic biomedical, behavioural and clinical sciences, medical ethics and medical jurisprudence and application of such knowledge in patient care.
- Interpersonal and communication skills that ensure effective information exchange with individual patients and their families and teamwork with other health professionals, the scientific community and the public.
- Appraisal and utilisation of new scientific knowledge to update and continuously improve clinical practice.
- The ability to function as a supervisor, trainer and teacher in relation to colleagues, medical students and other health professionals.
- Capability to be a scholar, contributing to development and research in the field of Nephrology.
- Professionalism.
- Knowledge of public health and health policy issues: awareness and responsiveness in the larger context of the health care system, including e.g. the organisation of health care, partnership with health care providers and managers, the practice of cost-effective health care, health economics and resource allocations.
- Ability to understand health care and identify and carry out system-based improvement of care.
**Professionalism:** Being a good doctor is more than technical competence. It involves values – putting patients first, safeguarding their interests, being honest, communicating with care and personal attention, and being committed to lifelong learning and continuous improvement. Developing and maintaining values are important; however, it is only through putting values into action that doctors demonstrate the continuing trustworthiness with the public legitimately expect. According to the Medical Council, Good Professional Practice involves the following aspects:

- Effective communication
- Respect for autonomy and shared decision-making
- Maintaining confidentiality
- Honesty, openness and transparency (especially around mistakes, near-misses and errors)
- Raising concerns about patient safety
- Maintaining competence and assuring quality of medical practice
Entry Requirements
Applicants for Higher Specialist Training (HST) in Nephrology must have a certificate of completion Basic Specialist Training (BST) in General Internal Medicine) and obtained the MRCPI.

BST should consist of a minimum of 24 months involved with direct patient care supervised by senior clinicians and based on a clinical curriculum and professional and ethical practice learnt through mentorship by senior clinicians and supported by RCPI’s mandatory courses.

**BST in General Internal Medicine (GIM) is defined as follows:**
- A minimum of 24 months in approved posts, with direct involvement in patient care and offering a wide range of experience in a variety of specialties.
- At least 12 of these 24 months must be spent on a service or services in which the admissions are acute and unselected.
- Assessment of knowledge and skills gained by each trainee during their clinical experience. This assessment takes place in the form of the mandatory MRCPI examination.
- For further information please review the BST curriculum

Those who do not hold a BST certificate and MRCPI must provide evidence of equivalency.

Entry on the training programme is at year 1. Deferrals are not allowed on entry to Higher Specialist Training.
Duration & Organisation of Training
The duration of Higher Specialist Training in Nephrology and General Internal Medicine is 5 years, at least one year of which must involve high-intensity Nephrology exposure, including dedicated acute Nephrology on-take and acute renal transplantation exposure, and be free of any General Internal commitment. One year of the 5 may also be gained from a period of full-time research. For further information on the training requirements for General Internal Medicine please refer to the GIIM curriculum.

Essential Training: Trainees must attend study days as advised by the National Speciality Director.

All SpRs are expected to take the ASN (American Society of Nephrology) examination in their second year of training and once again before completing the SpR Program. This is organised by your specialty coordinator.

Minimum Procedures: While no particular order or sequence of training will be imposed and programmes offered should be flexible i.e. capable of being adjusted to meet trainees’ needs, trainees must spend the first two years of training in clinical posts in Ireland before undertaking any period of research or out of programme clinical experience (OCPE). The earlier years will usually be directed towards acquiring a broad general experience of Nephrology under appropriate supervision. An increase in the content of hands-on experience follows naturally, and, as confidence is gained and abilities are acquired, the trainee will be encouraged to assume a greater degree of responsibility and independence.

If an intended career path would require a trainee to develop further an interest in a sub-specialty within Nephrology this should be accommodated as far as possible within the training period, re-adjusting timetables and postings accordingly.

Generic knowledge, skills and attitudes support competencies which are common to good medical practice in all of the medical and related specialties. It is intended that all Specialist Registrars should re-affirm those competencies during Higher Specialist Training. No time-scale of acquisition is offered, but failure to make progress towards meeting these important objectives at an early stage would cause concern about a SpR’s suitability and ability to become independently capable as a specialist.
Flexible Training

National Flexible Training Scheme – HSE NDTP

The HSE NDTP operates a National Flexible Training Scheme which allows a small number of Trainees to train part time, for a set period of time.

Overview
- Have a well-founded reason for applying for the scheme e.g. personal family reasons
- Applications may be made up to 12 months in advance of the proposed date of commencement of flexible training and no later than 4 months in advance of the proposed date of commencement
- Part-time training shall meet the same requirements as full-time training, from which it will differ only in the possibility of limited participation in medical activities to a period of at least half of that provided for full-time trainees

Job Sharing - RCPI

The aim of job sharing is to retain doctors within the medical workforce who are unable to continue training on a full-time basis.

Overview
- A training post can be shared by two trainees who are training in the same specialty and are within two years on the training pathway
- Two trainees will share one full-time post with each trainee working 50% of the hours
- Ordinarily it will be for the period of 12 months from July to July each year in line with the training year
- Trainees who wish to continue job sharing after this period of time will be required to re-apply
- Trainees are limited to no more than 2 years of training at less than full-time over the course of their training programme

Post Re-assignment – RCPI

The aim of post re-assignment is to support trainees who have had an unforeseen and significant change in their personal circumstances since the commencement of their current training programme which requires a change to the agreed post/rotation.

Overview:
- Priority will be given to trainees with a significant change in circumstances due to their own disability, it will then be given to trainees with a change in circumstances related to caring or parental responsibilities. Any applications received from trainees with a change involving a committed relationship will be considered afterwards
- If the availability of appropriate vacancies is insufficient to accommodate all requests eligible trainees will be selected on a first come, first serve basis

For further details on all of the above flexible training options, please see the Postgraduate Specialist Training page on the College website www.rcpi.ie
Training Programme

The training programme offered will provide opportunities to fulfil all of the requirements of the curriculum of training for Nephrology and in approved training hospitals. Each post within the programme will have a named trainer/educational supervisor and programmes will be under the direction of the National Specialty Director for Nephrology or, in the case of GIM, the Regional Specialty Advisor. Programmes will be as flexible as possible consistent with curricular requirements, for example to allow the trainee to develop a sub-specialty interest.

The experience gained through rotation around different departments is recognised as an essential part of HST. A Specialist Registrar may not remain in the same unit for longer than 2 years of clinical training; or with the same trainer for more than 1 year.

Where an essential element of the curriculum is missing from a programme, access to it should be arranged, by day release for example, or if necessary by secondment.

Training, Research & Audit

All trainees are required to participate in teaching. They should also receive basic training in research methods, including statistics, so as to be capable of critically evaluating published work.

A period of supervised research relevant to Nephrology is considered highly desirable and will contribute up to 12 months towards the completion of training. Some trainees may wish to spend two or three years in research leading to an MSc, MD, or PhD, by stepping aside from the programme for a time. For those intending to pursue an academic path, an extended period of research may be necessary in order to explore a topic fully or to take up an opportunity of developing the basis of a future career. Such extended research may continue after the CSCST is gained. However, those who wish to engage in clinical medical practice must be aware of the need to maintain their clinical skills during any prolonged period concentrated on a research topic, if the need to re-skill is to be avoided.

Trainees are required to engage in audit during training and to provide evidence of having completed the process.
ePortfolio

The trainee is required to keep their ePortfolio up to date and maintained throughout HST. The ePortfolio will be countersigned as appropriate by the trainers to confirm the satisfactory fulfilment of the required training experience and the acquisition of the competencies set out in the Curriculum. This will remain the property of the trainee and must be produced at the annual Evaluation meeting.

The trainee also has a duty to maximise opportunities to learn, supplementing the training offered with additional self-directed learning in order to fulfil all the educational goals of the curriculum. Trainees must co-operate with other stakeholders in the training process. It is in a SpR’s own interest to maintain contact with the Medical Training Department and Dean of Postgraduate Specialist Training, and to respond promptly to all correspondence relating to training. “Failure to co-operate” will be regarded as, in effect, withdrawal from the HST’s supervision of training.

At the annual Evaluation, the ePortfolio will be examined. The results of any assessments and reports by educational supervisors, together with other material capable of confirming the trainee’s achievements, will be reviewed.

Assessment Process

The methods used to assess progress through training must be valid and reliable. The Curriculum has been re-written, describing the levels of competence which can be recognised. The assessment grade will be awarded on the basis of direct observation in the workplace by consultant supervisors. Time should be set aside for appraisal following the assessment e.g. of clinical presentations, case management, observation of procedures. As progress is being made, the lower levels of competence will be replaced progressively by those that are higher. Where the grade for an item is judged to be deficient for the stage of training, the assessment should be supported by a detailed note which can later be referred to at the Annual Evaluation Meeting.

The assessment of training may utilise the Mini-CEX, DOPS and Case Based Discussions (CBD) methods adapted for the purpose. These methods of assessment have been made available by HST for use at the discretion of the NSD and nominated trainer. They are offered as a means of providing the trainee with attested evidence of achievement in certain areas of the Curriculum e.g. competence in procedural skills, or in generic components. Assessment will also be supported by the trainee’s portfolio of achievements and performance at relevant meetings, presentations, audit, in tests of knowledge, attendance at courses and educational events.
Annual Evaluation of Progress

Overview

The HST Annual Evaluation of Progress (AEP) is the formal method by which a trainee’s progression through her/his training programme is monitored and recorded each year. The evidence to be reviewed by the panel is recorded by the trainee and trainer in the trainee’s e-Portfolio. There is externality in the process with the presence of the National Specialty Director (NSD), a Chairperson and an NSD Forum Representative. Trainer’s attendance at the Evaluation is mandatory, if it is not possible for the trainer to attend in person, teleconference facilities can be arranged if appropriate. In the event of a penultimate year Evaluation an External Assessor, who is a consultant in the relevant specialty and from outside the Republic of Ireland will be required.

Purpose of Annual Evaluation

- Enhance learning by providing formative Evaluation, enabling trainees to receive immediate feedback, measure their own performance and identify areas for development;
- Drive learning and enhance the training process by making it clear what is required of trainees and motivating them to ensure they receive suitable training and experience;
- Provide robust, summative evidence that trainees are meeting the curriculum standards during the training programme;
- Ensure trainees are acquiring competencies within the domains of Good Medical Practice;
- Assess trainees’ actual performance in the workplace;
- Ensure that trainees possess the essential underlying knowledge required for their specialty;
- Inform Medical Training, identifying any requirements for targeted or additional training where necessary and facilitating decisions regarding progression through the training programme;
- Identify trainees who should be advised to consider a change in career direction.

Structure of the Meeting

The AEP panel speaks to the trainee alone in the first instance. The trainee is then asked to leave the room and a discussion with the trainer follows. Once the panel has talked to the trainer, the trainee is called back and given the recommendations of the panel and the outcome of the AEP.

At the end of the Evaluation, all panel members and the Trainee agree to the outcome of the Evaluation and the recommendations for future training. This is recorded on the AEP form, which is then signed electronically by the Medical Training Coordinator on behalf of the panel and trainee. The completed form and recommendations will be available to the trainee and trainers within their ePortfolio.

Outcomes

- Trainees whose progress is satisfactory will be awarded their AEP
- Trainees who are being certified as completing training receive their final AEP
- Trainees who need to provide further documentation or other minor issues, will be given 2 weeks (maximum 8) from the date of their AEP to meet the requirements. Their AEP outcome will be withheld until all requirements have been met.
- Trainees who are experiencing difficulties and/or need to meet specific requirements for that year of training will not be awarded their AEP. A date for an interim AEP will be decided and the trainee must have met all the conditions outlined in order to be awarded their AEP for that year of training. The “Chairperson’s Overall Assessment Report” will give a detailed outline of the issues which have led to this decision and this will go the Dean of Postgraduate Specialist Training for further consideration.
- Trainees who fail to progress after an interim Evaluation will not be awarded their AEP.

The Dean of Postgraduate Training holds the final decision on AEP outcomes. Any issues must be brought to the Dean and the Annual Chairperson’s Meeting for discussion.
Facilities
A consultant trainer/educational supervisor has been identified for each approved post. He/she will be responsible for ensuring that the educational potential of the post is translated into effective training which is being fully utilized. The training objectives to be secured should be agreed between trainee and trainer at the commencement of each posting in the form of a written training plan. The trainer will be available throughout, as necessary, to supervise the training process.

All training locations approved for HST have been inspected by the medical training department. Each must provide an intellectual environment and a range of clinical and practical facilities sufficient to enable the knowledge, skills, clinical judgement and attitudes essential to the practice of Nephrology to be acquired.

Physical facilities include the provision of sufficient space and opportunities for practical and theoretical study; access to professional literature and information technologies so that self-learning is encouraged and data and current information can be obtained to improve patient management.

Trainees in Nephrology should have access to an educational programme of e.g. lectures, demonstrations, literature reviews, multidisciplinary case conferences, seminars, study days etc., capable of covering the theoretical and scientific background to the specialty. Trainees should be notified in advance of dates so that they can arrange for their release. For each post, at inspection, the availability of an additional limited amount of study leave for any legitimate educational purpose has been confirmed. Applications, supported if necessary by a statement from the consultant trainer, will be processed by the relevant employer.
Generic Components
This chapter covers the generic components which are relevant to HST trainees of all specialties but with varying degrees of relevance and appropriateness, depending on the specialty. As such, this chapter needs to be viewed as an appropriate guide of the level of knowledge and skills required from all HST trainees with differing application levels in practice.
Standards of Care

Objective: To be able to consistently and effectively assess and treat patients’ problems

Medical Council Domains of Good Professional Practice: Patient Safety and Quality of Patient Care; Relating to Patients; Communication and Interpersonal Skills; Collaboration and Teamwork: Management (including Self-Management); Clinical Skills.

KNOWLEDGE

Diagnosing Patients

- How to carry out appropriate history taking
- How to appropriately examine a patient
- How to make a differential diagnosis

Investigation, indications, risks, cost-effectiveness

- The pathophysiological basis of the investigation
- Knowledge of the procedure for the commonly used investigations, common or/and serious risks
- Understanding of the sensitivity and specificity of results, artefacts, PPV and NPV
- Understanding significance, interpreting and explaining results of investigations
- Logical approach in choosing, sequencing and prioritising investigations

Treatment and management of disease

- Natural history of diseases
- Quality of life concepts
- How to accurately assess patient’s needs, prescribe, arrange treatment, recognise and deal with reactions / side effects
- How to set realistic therapeutic goals, to utilise rehabilitation services, and use palliative care approach appropriately
- Recognising that illness (especially chronic and/or incapacity) has an impact on relationships and family, having financial as well as social effects e.g. driving

Disease prevention and health education

- Screening for disease, (methods, advantages and limitations),
- Health promotion and support agencies; means of providing sources of information for patients
- Risk factors, preventive measures, strategies applicable to smoking, alcohol, drug abuse, lifestyle changes
- Disease notification; methods of collection and sources of data

Notes, records, correspondence

- Functions of medical records, their value as an accurate up-to-date commentary and source of data
- The need and place for specific types of notes e.g. problem-orientated discharge, letters, concise out-patient reports
- Appreciating the importance of up-to-date, easily available, accurate information, and the need for communicating promptly e.g. with primary care

Prioritising, resourcing and decision taking

- How to prioritise demands, respond to patients’ needs and sequence urgent tasks
- Establishing (clinical) priorities e.g. for investigations, intervention; how to set realistic goals; understanding the need to allocate sufficient time, knowing when to seek help
- Understanding the need to complete tasks, reach a conclusion, make a decision, and take action within allocated time
- Knowing how and when to conclude
Handover

- Know what are the essential requirements to run an effective handover meeting
  - Sufficient and accurate patients information
  - Adequate time
  - Clear roles and leadership
  - Adequate IT
- Know how to prioritise patient safety
  - Identify most clinically unstable patients
  - Use ISBAR (Identify, Situation, Background, Assessment, Recommendations)
  - Proper identification of tasks and follow-ups required
  - Contingency plans in place
- Know how to focus the team on actions
  - Tasks are prioritised
  - Plans for further care are put in place
  - Unstable patients are reviewed

Relevance of professional bodies

- Understanding the relevance to practice of standards of care set down by recognised professional bodies – the Medical Council, Medical Colleges and their Faculties, and the additional support available from professional organisations e.g. IMO, Medical Defence Organisations and from the various specialist and learned societies

SKILLS

- Taking and analysing a clinical history and performing a reliable and appropriate examination, arriving at a diagnosis and a differential diagnosis
- Liaising, discussing and negotiating effectively with those undertaking the investigation
- Selecting investigations carefully and appropriately, considering (patients’) needs, risks, value and cost effectiveness
- Appropriately selecting treatment and management of disease
- Discussing, planning and delivering care appropriate to patient’s needs and wishes
- Preventing disease using the appropriate channels and providing appropriate health education and promotion
- Collating evidence, summarising, recognising when objective has been met
- Screening
- Working effectively with others including
  - Effective listening
  - Ability to articulate and deliver instructions
  - Encourage questions and openness
  - Leadership skills
- Ability to prioritise
- Ability to delegate effectively
- Ability to advise on and promote lifestyle change, stopping smoking, control of alcohol intake, exercise and nutrition
- Ability to assess and explain risk, encourage positive behaviours e.g. immunisation and preventive measures
- Ability to enlist patients’ involvement in solving their health problems, providing information, education
- Availing of support provided by voluntary agencies and patient support groups, as well as expert services e.g. detoxification / psychiatric services
- Valuing contributions of health education and disease prevention to health in a community
- Compiling adequate case notes, with results of examinations, investigations, procedures performed, sufficient to provide an accurate, detailed account of the diagnostic and management process and outcome, providing concise, informative progress reports (both written and oral)
- Maintaining legible records in line with the Guide to Professional Conduct and Ethics for Registered Medical Practitioners in Ireland
- Actively engaging with professional/representative/specialist bodies
ASSESSMENT & LEARNING METHODS

- Consultant feedback
- Workplace based assessment e.g. Mini-CEX, DOPS, CBD
- Educational supervisor’s reports on observed performance (in the workplace)
- Audit
- Medical Council Guide to Professional Conduct and Ethics
Dealing with & Managing Acutely Ill Patients in Appropriate Specialties

**Objectives:** To be able to assess and initiate management of patients presenting as emergencies, and to appropriately communicate the diagnosis and prognosis. Trainees should be able to recognise the critically ill and immediately assess and resuscitate if necessary, formulate a differential diagnosis, treat and/or refer as appropriate, elect relevant investigations and accurately interpret reports.

**Medical Council Domains of Good Professional Practice:** Patient Safety and Quality of Patient Care, Clinical Skills.

### KNOWLEDGE

**Management of acutely ill patients with medical problems**
- Presentation of potentially life-threatening problems
- Indications for urgent intervention, the additional information necessary to support action (e.g. results of investigations) and treatment protocols
- When to seek help, refer/transfer to another specialty
- ACLS protocols
- Ethical and legal principles relevant to resuscitation and DNAR in line with National Consent Policy
- How to manage acute medical intake, receive and refer patients appropriately, interact efficiently and effectively with other members of the medical team, accept/undertake responsibility appropriately
- Management of overdose
- How to anticipate / recognise, assess and manage life-threatening emergencies, recognise significantly abnormal physiology e.g. dysrhythmia and provide the means to correct e.g. defibrillation
- How to convey essential information quickly to relevant personnel: maintaining legible up-to-date records documenting results of investigations, making lists of problems dealt with or remaining, identifying areas of uncertainty; ensuring safe handover

**Managing the deteriorating patient**
- How to categorise a patients’ severity of illness using Early Warning Scores (EWS) guidelines
- How to perform an early detection of patient deterioration
- How to use a structured communication tool (ISBAR)
- How to promote an early medical review, prompted by specific trigger points
- How to use a definitive escalation plan

**Discharge planning**
- Knowledge of patient pathways
- How to distinguish between illness and disease, disability and dependency
- Understanding the potential impact of illness and impairment on activities of daily living, family relationships, status, independence, awareness of quality of life issues
- Role and skills of other members of the healthcare team, how to devise and deliver a care package
- The support available from other agencies e.g. specialist nurses, social workers, community care
- Principles of shared care with the general practitioner service
- Awareness of the pressures/dynamics within a family, the economic factors delaying discharge but recognise the limit to benefit derived from in-patient care
SKILLS

- BLS/ACLS (or APLS for Paediatrics)
- Dealing with common medical emergencies
- Interpreting blood results, ECG/Rhythm strips, chest X-Ray, CT brain
- Giving clear instructions to both medical and hospital staff
- Ordering relevant follow up investigations
- Discharge planning
- Knowledge of HIPE (Hospital In-Patient Enquiry)
- Multidisciplinary team working
- Communication skills
- Delivering early, regular and on-going consultation with family members (with the patient’s permission) and primary care physicians
- Remaining calm, delegating appropriately, ensuring good communication
- Attempting to meet patients’/relatives’ needs and concerns, respecting their views and right to be informed in accordance with Medical Council Guidelines
- Establishing liaison with family and community care, primary care, communicate / report to agencies involved
- Demonstrating awareness of the wide ranging effects of illness and the need to bridge the gap between hospital and home
- Categorising a patient's severity of illness
- Performing an early detection of patient deterioration
- Use of structured communication tool (e.g. ISBAR)

ASSESSMENT & LEARNING METHODS

- ACLS course
- Record of on call experience
- Mini-CEX (acute setting)
- Case Based Discussion (CBD)
- Consultant feedback
Good Professional Practice

Objective: Trainees must appreciate that medical professionalism is a core element of being a good doctor and that good medical practice is based on a relationship of trust between the profession and society, in which doctors are expected to meet the highest standards of professional practice and behaviour.

Medical Council Domains of Good Professional Practice: Relating to Patients, Communication and Interpersonal Skills, Professionalism, Patient Safety and Quality of Patient Care.

KNOWLEDGE

Effective Communication

- How to listen to patients and colleagues
- Disclosure – know the principles of open disclosure
- Knowledge and understanding of valid consent
- Teamwork
- Continuity of care

Ethics

- Respect for autonomy and shared decision making
- How to enable patients to make their own decisions about their health care
- How to place the patient at the centre of care
- How to protect and properly use sensitive and private patient information according to Data Protection Act and how to maintain confidentiality
- The judicious sharing of information with other healthcare professionals where necessary for care following Medical Council Guidelines
- Maintaining competence and assuring quality of medical practice
- How to work within ethical and legal guideline when providing clinical care, carrying research and dealing with end of life issues

Honesty, openness and transparency (mistakes and near misses)

- When and how to report a near miss or adverse event
- Knowledge of preventing and managing near misses and adverse events. Incident reporting: root cause and system analysis
- Understanding and learning from errors
- Understanding and managing clinical risk
- Managing complaints
- Following open disclosure practices
- Knowledge of national policy and National Guidelines on Open Disclosure

Raising concerns about patient safety

- The importance of patient safety relevance in health care setting
- Standardising common processes and procedures – checklists, vigilance
- The multiple factors involved in failures
- Safe healthcare systems and provision of a safe working environment
- The relationship between ‘human factors’ and patient safety
- Safe working practice, role of procedures and protocols in optimal practice
- How to minimise incidence and impact of adverse events
- Knowledge and understanding of Reason's Swiss cheese model
- Understanding how and why systems break down and why errors are made
- Health care errors and system failures
- Human and economic costs
SKILLS

- Effective communication with patients, families and colleagues
- Co-operation and collaboration with colleagues to achieve safe and effective quality patient care
- Being an effective team player
- Ability to learn from errors and near misses to prevent future errors
- Using relevant information from complaints, incident reports, litigation and quality improvement reports in order to control risks
- Minimising errors during invasive procedures by developing and adhering to best-practice guidelines for safe surgery
- Minimising medication errors by practicing safe prescribing principles
- Using the Open Disclosure Process Algorithm
- Managing errors and near-misses
- Managing complaints
- Ethical and legal decision making skills

ASSESSMENT & LEARNING METHODS

- Consultant feedback at annual assessment
- Workplace based assessment e.g. Mini-CEX, DOPS, CBD
- Educational supervisor’s reports on observed performance (in the workplace): prioritisation of patient safety in practice
- Patient Safety (on-line) – recommended
- RCPI HST Leadership in Clinical Practice
- Quality improvement methodology course - recommended
- RCPI Ethics programmes (I-IV)
- Medical Council Guide to Professional Conduct and Ethics
- Reflective learning around ethical dilemmas encountered in clinical practice
Infection Control

Objective: To be able to appropriately manage infections and risk factors for infection at an institutional level, including the prevention of cross-infections and hospital acquired infection

Medical Council Domains of Good Professional Practice: Patient Safety and Quality of Patient Care; Management (including Self-Management).

KNOWLEDGE

Within a consultation

- The principles of infection control as defined by the HIQA
- How to minimise the risk of cross-infection during a patient encounter by adhering to best practice guidelines available (including the 5 Moments for Hand Hygiene guidelines)
- The principles of preventing infection in high risk groups e.g. managing antibiotic use to prevent Clostridium difficile
- Knowledge and understanding the local antibiotic prescribing policy
- Awareness of infections of concern, e.g. MRSA, Clostridium difficile
- Best practice in isolation precautions
- When and how to notify relevant authorities in the case of infectious disease requiring notification
- In surgery or during an invasive procedure, understanding the increased risk of infection in these patients and adhering to guidelines for minimising infection in such cases
- The guidelines for needle-stick injury prevention and management

During an outbreak

- Guidelines for minimising infection in the wider community in cases of communicable diseases and how to seek expert opinion or guidance from infection control specialists where necessary
- Hospital policy/seeking guidance from occupational health professional regarding the need to stay off work/restrict duties when experiencing infections the onward transmission of which might impact on the health of others

SKILLS

- Practicing aseptic techniques and hand hygiene
- Following local and national guidelines for infection control and management
- Prescribing antibiotics according to antibiotic guidelines
- Encouraging staff, patients and relatives to observe infection control principles
- Communicating effectively with patients regarding treatment and measures recommended to prevent re-infection or spread
- Collaborating with infection control colleagues to manage more complex or uncommon types of infection including those requiring isolation e.g. transplant cases, immunocompromised host
- In the case of infectious diseases requiring disclosure:
  o Working knowledge of those infections requiring notification
  o Undertaking notification promptly
  o Collaborating with external agencies regarding reporting, investigating and management of notifiable diseases
  o Enlisting / requiring patients’ involvement in solving their health problems, providing information and education
  o Utilising and valuing contributions of health education and disease prevention and infection control to health in a community
ASSESSMENT & LEARNING METHODS

- Consultant feedback at annual assessment
- Workplace based assessment e.g. Mini-CEX, DOPS, CBD
- Educational supervisor’s reports on observed performance (in the workplace): practicing aseptic techniques as appropriate to the case and setting, investigating and managing infection, prescribing antibiotics according to guidelines
- Completion of infection control induction in the workplace
Therapeutics and Safe Prescribing

Objective: To progressively develop ability to prescribe, review and monitor appropriate therapeutic interventions relevant to clinical practice in specific specialities including non-pharmacological therapies and preventative care.

Medical Council Domains of Good Professional Practice: Patient Safety and Quality of Patient Care.

KNOWLEDGE

- Pharmacology, therapeutics of treatments prescribed, choice of routes of administration, dosing schedules, compliance strategies; the objectives, risks and complications of treatment cost-effectiveness
- Indications, contraindications, side effects, drug interaction, dosage and route of administration of commonly used drugs
- Commonly prescribed medications
- Adverse drug reactions to commonly used drugs, including complementary medicines
- Identifying common prescribing hazards
- Identifying high risk medications
- Drugs requiring therapeutic drug monitoring and interpretation of results
- The effects of age, body size, organ dysfunction and concurrent illness or physiological state e.g. pregnancy on drug distribution and metabolism relevant to own practice
- Recognising the roles of regulatory agencies involved in drug use, monitoring and licensing e.g. IMB, and hospital formulary committees
- Procedure for monitoring, managing and reporting adverse drug reaction
- Effects of medications on patient activities including potential effects on a patient’s fitness to drive
- The role of The National Medicines Information Centre (NMIC) in promoting safe and efficient use of medicine
- Differentiating drug allergy from drug side effects
- Good Clinical Practice guidelines for seeing and managing patients who are on clinical research trials

SKILLS

- Writing a prescription in line with guidelines
- Appropriately prescribing for the elderly, children and pregnant and breast feeding women
- Making appropriate dose adjustments following therapeutic drug monitoring, or physiological change (e.g. deteriorating renal function)
- Reviewing and revising patients’ long term medications
- Anticipating and avoiding defined drug interactions, including complementary medicines
- Advising patients (and carers) about important interactions and adverse drug effects including effects on driving
- Providing comprehensible explanations to the patient, and carers when relevant, for the use of medicines
- Being open to advice and input from other health professionals on prescribing
- Participating in adverse drug event reporting
- Taking a history of drug allergy and previous side effects
ASSESSMENT & LEARNING METHODS

- Consultant feedback
- Workplace based assessment e.g. Mini-CEX, DOPS, CBD
- Educational supervisor’s reports on observed performance (in the workplace): prioritisation of patient safety in prescribing practice
- Principles of Antibiotics Use (on-line) – recommended
- Guidance for health and social care providers - Principles of good practice in medication reconciliation (HIQA)
Self-Care and Maintaining Well-Being

Objectives:
1. To ensure that trainees understand how their personal histories and current personal lives, as well as their values, attitudes, and biases affect their care of patients so that they can use their emotional responses in patient care to their patients’ benefit
2. To ensure that trainees care for themselves physically and emotionally, and seek opportunities for enhancing their self-awareness and personal growth

Medical Council Domains of Good Professional Practice: Patient Safety and Quality of Patient Care, Relating to Patients, Communication and Interpersonal Skills, Collaboration and Teamwork, Management (including self-management).

KNOWLEDGE

- Self knowledge – understand own psychological strengths and limitations
- Understand how own personality characteristics (such as need for approval, judgemental tendencies, needs for perfection and control) affect relationships with patients and colleagues
- Knowledge of core beliefs, ideals, and personal philosophies of life, and how these relate to own goals in medicine
- Know how family-of-origin, race, class, religion and gender issues have shaped own attitudes and abilities to discuss these issues with patients
- Understand the difference between feelings of sympathy and feelings of empathy for specific patients
- Know the factors between a doctor and patient that enhance or interfere with abilities to experience and convey empathy
- Understanding of own attitudes toward uncertainty and risk taking and own need for reassurance
- How own relationships with certain patients can reflect attitudes toward paternalism, autonomy, benevolence, non-malfeasance and justice
- Recognise own feelings (love, anger, frustration, vulnerability, intimacy, etc) in “easy” and difficult patient-doctor interactions
- Recognising the symptoms of stress and burn out

SKILLS

- Exhibiting empathy and showing consideration for all patients, their impairments and attitudes irrespective of cultural and other differences
- Ability to create boundaries with patients that allow for therapeutic alliance
- Challenge authority appropriately from a firm sense of own values and integrity and respond appropriately to situations that involve abuse, unethical behaviour and coercion
- Recognise own limits and seek appropriate support and consultation
- Work collaboratively and effectively with colleagues and other members of health care teams
- Manage effectively commitments to work and personal lives, taking the time to nurture important relationship and oneself
- Ability to recognise when falling behind and adjusting accordingly
- Demonstrating the ability to cope with changing circumstances, variable demand, being prepared to re-prioritise and ask for help
- Utilising a non-judgemental approach to patient’s problem
- Recognise the warning signs of emotional ill-health in self and others and be able to ask for appropriate help
- Commitment to lifelong process of developing and fostering self-awareness, personal growth and well being
- Be open to receiving feedback from others as to how attitudes and behaviours are affecting their care of patients and their interactions with others
- Holding realistic expectations of own and of others’ performance, time-conscious, punctual
- Valuing the breadth and depth of experience that can be accessed by associating with professional colleagues
ASSESSMENT & LEARNING METHODS

- On-going supervision
- Ethics courses
- RCPI HST Leadership in Clinical Practice course
- RCPI Physician Wellbeing and Stress Management
- RCPI Building Resilience in a Challenging Work Environment
Communication in Clinical and Professional Setting

Objective: To demonstrate the ability to communicate effectively and sensitively with patients, their relatives, carers and with professional colleagues in different situations.

Medical Council Domains of Good Professional Practice: Relating to Patients; Communication and Interpersonal Skills.

**KNOWLEDGE**

**Within a consultation**
- How to effectively listen and attend to patients
- How to structure an interview to obtain/convey information; identify concerns, expectations and priorities; promote understanding, reach conclusions; use appropriate language.
- How to empower the patient and encourage self-management

**Difficult circumstances**
- Understanding of potential areas for difficulty and awkward situations, knowing how and when to break bad news, how to negotiate cultural, language barriers, dealing with sensory or psychological and/or intellectual impairments, how to deal with challenging or aggressive behaviour.
- How to communicate essential information where difficulties exist, how to appropriately utilise the assistance of interpreters, chaperones, and relatives.
- How to deal with anger, frustration in self and others.
- Selecting appropriate environment; seeking assistance, making and taking time.

**Dealing with professional colleagues and others**
- How to communicate with doctors and other members of the healthcare team; how to provide concise, problem-orientated statement of facts and opinions (written, verbal or electronic).
- Knowledge of legal context of status of records and reports, of data protection (confidentiality), Freedom of Information (FOI) issues.
- Understanding of the relevance to continuity of care and the importance of legible, accessible, records.
- Knowing when urgent contact becomes necessary and the appropriate place for verbal, telephone, electronic, written communication.
- Recognition of roles and skills of other health professionals.
- Awareness of own abilities/limitations and when to seek help or give assistance, advice to others; when to delegate responsibility and when to refer.

**Maintaining continuity of care**
- Understanding the relevance to outcome of continuity of care, within and between phases of healthcare management.
- The importance of completion of tasks and documentation (e.g. before handover to another team, department, specialty), of identifying outstanding issues and uncertainties.
- Knowledge of the required attitudes, skills and behaviours which facilitate continuity of care such as maintaining (legible) records, being available and contactable, alerting others to avoid potential confusion or misunderstanding through communications failure.
Giving explanations

- The importance of possessing the facts, and of recognising uncertainty and conflicting evidence on which decisions have to be based
- How to secure, retain attention avoid distraction
- Understanding how adults receive information best, the relative value of the spoken, written, visual means of communication, use of reinforcement to assist retention
- Knowledge of risks of information overload
- Interpreting results, significance of findings, diagnosis, explaining objectives, limitations, risks of treatment, using communication adjusted to recipients’ ability to comprehend
- Ability to achieve level of understanding necessary to gain co-operation (compliance, informed choice, acceptance of opinion, advice, recommendation)

Responding to complaints

- Value of hearing and dealing with complaints promptly; the appropriate level, the procedures (departmental and institutional); sources of advice, assistance available
- The importance of obtaining and recording accurate and full information, seeking confirmation from multiple sources
- Knowledge of how to establish facts, identifying issues and responding quickly and appropriately to a complaint received

SKILLS

- Ability to elicit facts, using a mix of open and closed-ended questions appropriately
- Using “active listening” techniques such as nodding and eye contact
- Giving information clearly, avoiding jargon, confirming understanding, ability to encourage co-operation, compliance; obtaining informed consent
- Showing consideration and respect for other’s culture, opinions, patient’s right to be informed and make choices
- Respecting another’s right to opinions and to accept or reject advice
- Valuing perspectives of others contributing to management decisions
- Conflict resolution
- Dealing with complaints
- Communicating decisions in a clear and thoughtful manner
- Presentation skills
- Maintaining (legible) records
- being available, contactable, time-conscious
- Setting (and attempting to reach) realistic objectives, identifying and prioritising outstanding problems
- Using language, literature (leaflets) diagrams, educational aids and resources appropriately
- Ability to establish facts, identify issues and respond quickly and appropriately to a complaint received
- Accepting responsibility, involving others, and consulting appropriately
- Obtaining informed consent
- Discussing informed consent
- Giving and receiving feedback

ASSESSMENT & LEARNING METHODS

- Mastering Communication course (Year 1)
- Consultant feedback at annual assessment
  - Workplace based assessment e.g. Mini-CEX, DOPS, CBD
  - Educational supervisor’s reports on observed performance (in the workplace): communication with others e.g. at handover. ward rounds, multidisciplinary team members
- Presentations
- Ethics courses
- RCPI HST Leadership in Clinical Practice Course
Leadership

Objective: To have the knowledge, skills and attitudes to act in a leadership role and work with colleagues to plan, deliver and develop services for improved patient care and service delivery.

Medical Council Domains of Good Professional Practice: Patient Safety and Quality of Patient Care; Communication and Interpersonal Skill; Collaboration and Teamwork; Management (including Self-Management); Scholarship.

KNOWLEDGE

Personal qualities of leaders
- Knowledge of what leadership is in the context of the healthcare system appropriate to training level
- The importance of good communication in teams and the role of human interactions on effectiveness and patient safety

Working with others
- Awareness of own personal style and other styles and their impact on team performance
- The importance of good communication in teams and the role of human interactions on effectiveness and patient safety

Managing services
- The structure and function of Irish health care system
- Awareness of the challenges of managing in healthcare
  - Role of governance
  - Clinical directors
- Knowledge of planning and design of services
- Knowledge and understanding of the financing of the health service
  - Knowledge of how to prepare a budget
  - Defining value
  - Managing resources
- Knowledge and understanding of the importance of human factors in service delivery
  - How to manage staff training, development and education
- Managing performance
  - How to perform staff appraisal and deal effectively with poor staff performance
  - How to rewards and incentivise staff for quality and efficiency

Setting direction
- The external and internal drivers setting the context for change
- Knowledge of systems and resource management that guide service development
- How to make decisions using evidence-based medicine and performance measures
- How to evaluate the impact of change on health outcomes through ongoing service evaluation
SKILLS

- Effective communication with patients, families and colleagues
- Co-operation and collaboration with others; patients, service users, carers colleagues within and across systems
- Being an effective team player
- Ability to manage resources and people
- Managing performance and performance indicators

Demonstrating personal qualities

- Efficiently and effectively managing one-self and one’s time especially when faced with challenging situations
- Continues personal and professional development through scholarship and further training and education where appropriate
- Acting with integrity and honesty with all people at all times
- Developing networks to expand knowledge and sphere of influence
- Building and maintaining key relationships
- Adapting style to work with different people and different situations
- Contributing to the planning and design of services

ASSESSMENT & LEARNING METHODS

- Mastering Communication course (Year 1)
- RCPI HST Leadership in Clinical Practice (Year 3 – 5)
- Consultant feedback at annual assessment
- Workplace based assessment e.g. Mini-CEX, DOPS, CBD
- Educational supervisor’s reports on observed performance (in the workplace): on management and leadership skills
- Involvement in hospital committees where possible e.g. Division of Medicine, Drugs and Therapeutics, Infection Control etc.
Quality Improvement

**Objective:** To demonstrate the ability to identify areas for improvement and implement basic quality improvement skills and knowledge to improve patient safety and quality in the healthcare system.

**Medical Council Domains of Good Professional Practice:** Patient Safety and Quality of Patient Care; Communication and Interpersonal Skills; Collaboration and Teamwork; Management; Relating to Patients; Professionalism

### KNOWLEDGE

**Personal qualities of leaders**
- The importance of prioritising the patient and patient safety in all clinical activities and interactions

**Managing services**
- Knowledge of systems design and the role of microsystems
- Understanding of human factors and culture on patient safety and quality

**Improving services**
- How to ensure patient safety by adopting and incorporating a patient safety culture
- How to critically evaluate where services can be improved by measuring performance, and acting to improve quality standards where possible
- How to encourage a culture of improvement and innovation

**Setting direction**
- How to create a ‘burning platform’ and motivate other healthcare professionals to work together within quality improvement
- Knowledge of the wider healthcare system direction and how that may impact local organisations

### SKILLS

- Improvement approach to all problems or issues
- Engaging colleagues, patients and the wider system to identify issues and implement improvements
- Use of quality improvement methodologies, tools and techniques within every day practice
- Ensuring patient safety by adopting and incorporating a patient safety culture
- Critically evaluating where services can be improved by measuring performance, and acting to raise standards where possible
- Encouraging a culture of improvement and innovation

**Demonstrating personal qualities**
- Encouraging contributions and involvement from others including patients, carers, members of the multidisciplinary team and the wider community
- Considering process and system design, contributing to the planning and design of services

### ASSESSMENT & LEARNING METHODS

- RCPI HST Leadership in Clinical Practice
- Consultant feedback at annual assessment
- Involvement in hospital committees where possible e.g. Division of Medicine, Drugs and Therapeutics, Infection Control etc.
Scholarship
Objective: To develop skills in personal/professional development, teaching, educational supervision and research

Medical Council Domains of Good Professional Practice: Scholarship

KNOWLEDGE

Teaching, educational supervision and assessment
- Principles of adult learning, teaching and learning methods available and strategies
- Educational principles directing assessment methods including, formative vs. summative methods
- The value of regular appraisal / assessment in informing training process
- How to set effective educational objectives and map benefits to learner
- Design and delivery of an effective teaching event, both small and large group
- Use of appropriate technology / materials

Research, methodology and critical evaluation
- Designing and resourcing a research project
- Research methodology, valid statistical analysis, writing and publishing papers
- Ethical considerations and obtaining ethical approval
- Reviewing literature, framing questions, designing a project capable of providing an answer
- How to write results and conclusions, writing and/or presenting a paper
- How to present data in a clear, honest and critical fashion

Audit
- Basis for developing evidence-based medicine, kinds of evidence, evaluation; methodologies of clinical trials
- Sources from which useful data for audit can be obtained, the methods of collection, handling data, the audit cycle
- Means of determining best practice, preparing protocols, guidelines, evaluating their performance
- The importance of re-audit

SKILLS

- Bed-side undergraduate and post graduate teaching
- Developing and delivering lectures
- Carrying out research in an ethical and professional manner
- Performing an audit
- Presentation and writing skills – remaining impartial and objective
- Adequate preparation, timekeeping
- Using technology / materials

ASSESSMENT & LEARNING METHODS

- Health Research – An Introduction
- Effective Teaching and Supervising Skills course (online) - recommended
- Educational Assessment Skills course - recommended
- Performing audit course – mandatory
- Health Research Methods for Clinicians - recommended
Management

Objective: To understand the organisation, regulation and structures of the health services, nationally and locally, and to be competent in the use and management of information on health and health services, to develop personal effectiveness and the skills applicable to the management of staff and activities within a healthcare team.

Medical Council Domains of Good Professional Practice: Management.

KNOWLEDGE

Health service structure, management and organisation
- The administrative structure of the Irish Health Service, services provided in Ireland and their funding and how to engage with these for best results
- Department of Health, HSE and hospital management structures and systems
- The national regulatory bodies, health agencies and patient representative groups
- Understanding the need for business plans, annual hospital budgets, the relationship between the hospital and PCCC

The provision and use of information in order to regulate and improve service provision
- Methods of collecting, analysing and presenting information relevant to the health of a population and the apportionment of healthcare resources
- The common ways in which data is presented, knowing of the sources which can provide information relevant to national or to local services and publications available

Maintaining medical knowledge with a view to delivering effective clinical care
- Understanding the contribution that current, accurate knowledge can make to establishing clinical effectiveness, best practice and treatment protocols
- Knowledge of sources providing updates, literature reviews and digests

Delegation skills, empowerment and conflict management
- How to assess and develop personal effectiveness, improve negotiating, influencing and leadership skills
- How to manage time efficiently, deal with pressure and stress
- How to motivate others and operate within a multidisciplinary team

SKILLS
- Chairing, organising and participating in effective meetings
- Managing risks
- Managing time
- Delegating tasks effectively
- Managing conflicts
- Exploring, directing and pursuing a project, negotiating through the relevant departments at an appropriate level
- Ability to achieve results through an understanding of the organisation and its operation
- Ability to seek / locate information in order to define an issue needing attention e.g. to provide data relevant to a proposal for change, establishing a priority, obtaining resources
- Ability to make use of information, use IT, undertake searches and obtain aggregated data, to critically evaluate proposals for change e.g. innovative treatments, new technologies
- Ability to adjust to change, apply management, negotiating skills to manage change
- Appropriately using management techniques and seeking to improve these skills and personal effectiveness
## ASSESSMENT & LEARNING METHODS

- Mastering Communication course
- Performing Audit course
- RCPI HST Leadership in Clinical Practice
- Annual audit
- Consultant feedback on management and leadership skills

Involvement in hospital committees
Specialty Section
Section 1: Fluid, Electrolyte, and Acid-Base Disturbances

Objective: To provide the trainee with the skills and knowledge to assess and manage patients with fluid, electrolyte and acid base disturbances at a specialist level.

KNOWLEDGE
- The clinical importance of fluid, electrolyte and acid base abnormalities
- The physiology of water, electrolyte and acid base metabolism
- The pathophysiology of sodium, potassium, and hydrogen ion imbalance, and dysregulation of water homeostasis
- Methods used to investigate fluid, electrolyte, and acid base abnormalities

SKILLS
- Assessing patients with disorders of fluid, electrolyte, and acid base homeostasis and administration of appropriate management
- Interpretation of arterial blood gases quickly and accurately and giving a focused differential diagnosis for acid-base disorders
- Ordering and interpreting appropriate investigations for electrolyte and acid base disorders
- Management of patients with fluid, electrolyte and acid base disorders
- Diagnosis and management of patients with poisonings presenting with acid-base disturbance
- Explaining the implications of familial disorders

ASSESSMENT & LEARNING METHODS
- Case-based discussion (CBD), Mini-clinical evaluation exercise (mini-CEx), NephSAP continuous assessment (NCA), In-Training examination (ASN-ITE)
- St. Vincent’s Hospital Study day
Section 2. Disorders of Divalent Ions, CKD-Mineral Bone Disease and Kidney Stones.

Objective: To provide the trainee with the skills and knowledge to assess and manage patients with disorders of divalent ions, CKD mineral bone disease (CKD-MBD) and kidney stones at a specialist level.

KNOWLEDGE

- The physiology of calcium, phosphate, bone and mineral metabolism and the pathophysiology of CKD-MBD
- The use of biochemical tests, imaging techniques and histology in the diagnosis and management of CKD-MBD
- Indications for and the clinical use of dietary modification, phosphate binders, vitamin D preparations, calcimimetic drugs and parathyroidectomy
- The assessment of response to treatment for CKD-MBD
- Disorders of phosphate, magnesium and calcium balance
- The diagnosis, treatment and prevention of kidney stones
- The role of vitamin D in kidney disease

SKILLS

- Interpretation of the results of biochemical, radiological and histological investigations in patients with disorders of bone and mineral metabolism
- Diagnosis and management of CKD-MBD in patients with pre-dialysis CKD
- Management of CKD-MBD in patients on renal replacement therapy
- Identification and management of disorders of phosphate, magnesium and calcium balance
- Prevention, diagnosis and management of secondary and tertiary hyperparathyroidism
- Diagnosis and management of kidney stones; educating patients on the risk of recurrence and prevention strategies

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Cork University Hospital Study day
Section 3: Acute Kidney Injury and Critical Care Nephrology

Evaluation

Objective: To provide the trainee with the skills and knowledge to assess and manage patients with acute kidney injury (AKI) at a specialist level.

KNOWLEDGE

- The epidemiology, diagnostic evaluation and pathogenesis of AKI
- The pathophysiology of AKI in different clinical scenarios e.g. acute tubular necrosis, glomerulonephritis, etc.
- Methods available to grade severity of AKI
- Medication dosing and safe and effective prescribing for patients with AKI
- The management of common AKI syndromes, including:
  - Cardiorenal syndrome
  - Hepatorenal syndrome
  - Sepsis-associated AKI
  - Radiocontrast nephropathy

SKILLS

- Taking a history for AKI focusing on drug, social and environmental factors
- Performing a reliable and accurate clinical examination to assess or diagnose AKI and differentiates pre-renal failure, renal failure and urinary tract obstruction
- Ordering, interpreting and acts upon investigations appropriately including: biochemistry, haematology, microbiology, immunology and imaging
- Performing examinations of the urine sediment for the assessment of AKI
- Performing bedside ultrasound to identify kidney obstruction and kidney size (optional)
- Identifies patients at high risk of AKI and institutes preventative measures
- Initiation of appropriate specialist management of AKI and the underlying cause (including renal replacement therapy, immunosuppression, plasmapheresis etc)

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Mater Misericordiae Hospital Study day
Replacement Therapies in AKI

Objective: To provide the trainee with the skills and knowledge to prescribe and manage renal replacement therapy in acute kidney injury (AKI).

KNOWLEDGE

- The indications for acute dialysis
- The principles of haemodialysis, haemofiltration and haemodiafiltration and indications for their use
- The options for vascular access for acute renal replacement therapy

SKILLS

- Assesses the suitability of a patient for haemodialysis or haemofiltration
- Prescribes haemodialysis and haemofiltration safely, adjusts prescriptions appropriately and monitors response to treatment
- Prescribes medication safely and appropriately in patients with acute kidney injury
- Adjusts dialysis prescription in complex cases e.g. head injury, morbid obesity, acute liver failure, acute poisoning or drug overdose

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Mater Misericordiae Hospital Study day
Section 4: Chronic Kidney Disease and Progression

Objective: To provide the trainee with the skills and knowledge to assess and manage patients with chronic kidney disease (CKD) at a specialist level.

KNOWLEDGE
- The classification and stages of CKD
- Investigations used to assess the cause, severity and reversibility of CKD
- The use of estimating equations for glomerular filtration rate in the assessment of kidney function and diagnosis of CKD
- Natural history, timing of metabolic complications and prognosis of CKD
- Risk factors for CKD progression and their management
- The pathophysiology, diagnosis and management of diabetic nephropathy
- The pharmacology of medications in CKD and necessary dose adjustments
- The role of conservative or non-dialysis care of CKD in the elderly

SKILLS
- Taking an accurate clinical history in the assessment of CKD including drug history, family, social and environmental history
- Identify and treat reversible causes of CKD
- Managing the non-renal complications of CKD
- Identifying and treating cardiovascular risk factors in CKD patients, with appropriate referral for specialist cardiology review (including potential kidney transplant recipients)
- Discussing treatment options with patients appropriately and in liaison with the MDT to support the patient’s decision-making processes
- Making timely and appropriate plans for renal replacement therapy where necessary

ASSESSMENT & LEARNING METHODS
- CBD, Mini-CEx, NCA, ASN-ITE
- Limerick University Hospital Study Day
Section 5: Hypertension

Objective: To provide the trainee with the skills and knowledge to assess and manage patients with hypertension at a specialist level.

KNOWLEDGE

- Outline of the causes of secondary hypertension (HTN) and describes the interpretation of investigations and treatment
- International guidelines for treatment of HTN
- Unique considerations in treating HTN in special situations such as pregnancy, CKD and diabetes mellitus, and hypertensive urgency/ emergencies
- The importance of non-pharmacological measures in achieving BP targets
- The role of sodium intake in the pathogenesis of HTN
- The assessment and management of pre-eclampsia
- The diagnosis and management of resistant HTN
- The diagnosis and management of hypertensive emergencies

SKILLS

- Assessing a patient with HTN (including use of home and ambulatory BP monitoring) and appropriately investigates to exclude underlying secondary causes
- Identifying the patient with secondary HTN who is suitable for definitive treatment
- Instituting lifestyle measures and a suitable antihypertensive drug regime
- Prescribes antihypertensive medication to achieve blood pressure levels recommended by guidelines
- Monitors and reviews effectiveness of blood pressure control over time with patient and primary care team

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Galway University Hospital Study Day
Section 6: End-Stage Renal Disease and Dialysis Haemodialysis

Objective: To provide the trainee with skills and knowledge to be able to undertake the planning of haemodialysis, its prescription and measurement of adequacy.

KNOWLEDGE

- The methods of creating vascular access for haemodialysis
- The means to deliver purified water, the necessary standards and methods of assessment
- The principles of haemodialysis and the effects of changes in treatment length and frequency, different dialysis membranes and dialysate solutions
- An overview of the methods used to assess adequacy of haemodialysis
- The evidence for treatment targets of haemodialysis adequacy
- The complications of arterio-venous fistulae and artificial grafts
- The management of dialysis line sepsis, poor flow and line blockage
- The pathophysiology and management of intradialytic hypotension

SKILLS

- Prescribing haemodialysis for a patient initiating treatment and adjusting the prescription based on the patient’s progress and monitoring
- Advising on ultrafiltration, sodium profiling and the use of different dialysate solutions
- Discussing the therapeutic and lifestyle implications of home versus hospital-based haemodialysis with a patient and carers
- Assessing the suitability of different methods of vascular access
- Organising the day-to-day management of a haemodialysis unit
- Identifying and managing the complications of vascular access involving, when necessary, surgeons and radiologists
- Managing dialysis-related sepsis and develops protocols with microbiologists

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Waterford Regional Hospital Study Day
Peritoneal dialysis

Objective: To provide the trainee with skills and knowledge to be able to supervise and manage patients on chronic peritoneal dialysis (PD) at a specialist level.

KNOWLEDGE

- The principles of PD, including membrane physiology, dialysis solutions and their mechanism of action.
- The assessment of adequacy of PD and peritoneal membrane function
- An overview of the evidence base supporting treatment targets for adequate PD
- The diagnosis and management of PD associated peritonitis
- The management of the catheter exit site and the prevention, diagnosis and treatment of associated infection
- The diagnosis and management of mechanical problems associated with PD (including herniae, leaks, catheter malfunction)
- The methods used to recognise and manage peritoneal membrane injury, including ultrafiltration failure and encapsulating peritoneal sclerosis

SKILLS

- Assessing the suitability of a patient for PD in the context of other methods of renal replacement therapy
- Adjusting the prescription of PD and monitor change
- Adjusting the prescription of PD required following complications
- Managing the prevention and treatment of PD associated infections
- Managing PD technique failure and transfer to haemodialysis

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- PD symposium study day
Renal anaemia

Objective: To provide the trainee with the skills and knowledge to manage renal anaemia and to safely prescribe and monitor erythropoietic stimulating agents.

KNOWLEDGE

- The pathophysiology of renal anaemia and the haematological and biochemical methods to diagnose, assess and monitors treatment in renal anaemia
- Differences between anaemia secondary to CKD and other causes
- Indications for and the use of erythropoietic stimulating agents (ESAs) and their complications
- Indications for and use of oral and parenteral iron therapy and its complications
- Causes of resistance to ESA therapy and its investigation

SKILLS

- Diagnosing and treating renal anaemia, monitoring the effects of treatment and managing failure of treatment
- Managing renal anaemia in CKD patients not yet on renal replacement therapy
- Managing renal anaemia in CKD patients on renal replacement therapy
- Prescribing and monitoring iron replacement therapy
- Auditing the use of ESAs and iron therapy in individual patients and patient populations

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Galway University Hospital Study Day
Section 7. Transplantation

Assessment of the potential living donor and recipient

Objective: To provide the trainee with skills and knowledge to evaluate and manage patients who are suitable for kidney transplantation and kidney donation at a specialist level.

KNOWLEDGE

- The role of transplantation in the management of patients with ESRD
- Principles of kidney transplantation, and the medical, surgical, ethical, and social contraindications
- The benefits and risks of transplantation compared with other treatment modalities for ESRD
- The relative risks and benefits of living donor and deceased donor kidney transplantation
- Principles of blood group typing, HLA matching, and donor –recipient cross matching.

SKILLS

- Assessing the suitability of patients with ESRD for kidney transplantation
- Discussing issues around living donor and pre-emptive transplantation
- Counseling patients and relatives in all aspects of kidney transplantation including living kidney donation
- Assessing the suitability of a person as a living kidney donor
- Developing and carrying out protocols for pre-transplant assessment of recipients and potential living donors.

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Beaumont Hospital Study Day
Early management of the kidney transplant recipient (under 3 months)

Objective: To provide the trainee with skills and knowledge to be able to manage patients in the early stages post kidney transplant at a specialist level.

KNOWLEDGE

- Issues that can influence outcomes early post kidney transplantation
- Medical and surgical problems which occur early post kidney transplant
- Indications for radiological investigation (ultrasound scan, radio-isotope scanning etc) and transplant biopsy early post kidney transplant
- The role of kidney transplant biopsy and the Banff scoring criteria in the diagnosis of acute rejection
- The mode of action and adverse effects of immunosuppressive agents and the potential for interaction with other drugs
- Available management strategies for acute transplant rejection
- Factors early post transplant that influence long term graft function

SKILLS

- Optimising the graft and patient outcome early post kidney transplantation
- Assessing the significance of changes in kidney transplant function
- Investigation of kidney transplant patients with acute transplant dysfunction and interprets the results of investigations
- Evaluation of patients with surgical and medical complications of kidney transplantation
- Planing and modifying immunosuppressive therapy regimens

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Beaumont Hospital Study Day
Long term care of the kidney transplant recipient

Objective: To provide the trainee with skills and knowledge to manage the long term supervision and management of kidney transplant recipients at a specialist level.

KNOWLEDGE

- Factors that influence long term patient and kidney transplant survival
- Long-term medical and surgical problems which can occur following kidney transplant
- Late causes of graft dysfunction after kidney transplantation
- Potential long term adverse effects of immunosuppressive agents
- Strategies that maximise long term graft function and survival
- Recognition of increased risk of cardiovascular and malignant disease in the long term transplant patient and the treatment and preventative strategies available

SKILLS

- Identifying declining transplant function, assesses significance of changes, investigates appropriately, and makes appropriate changes to management
- Utilises strategies that optimise long term graft and patient outcomes
- Identifying and managing cardiovascular, malignant and infectious problems in long-term kidney transplant recipients
- Modifying long term immunosuppressive therapy regimens and tailoring to an individual patient considering other comorbid conditions and changing circumstances
- Minimizing and managing the medical complications of a failing kidney transplant
- Counseling patients and relatives in all aspects of kidney transplantation, including graft failure and preparation for dialysis or re-transplantation

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- Beaumont Hospital Study Day
Plasmapheresis

**Objective:** To provide the trainee with skills and knowledge to be able to undertake the planning, prescription and monitoring of Plasmapheresis.

**KNOWLEDGE**
- Indications for plasmapheresis.
- The principles of plasmapheresis and complications of treatment.

**SKILLS**
- Assessing the suitability of a patient for plasmapheresis
- Prescribing plasmapheresis safely and assessing response to treatment
- Managing the patient with acute kidney failure requiring both plasmapheresis and acute kidney replacement therapy

**ASSESSMENT & LEARNING METHODS**
- CBD, Mini-CEx, NCA, ASN-ITE
- Beaumont Hospital Study Day
Section 8: Glomerular, Vascular, and Tubulointerstitial Diseases

Clinical presentation and assessment of glomerular disease

Objective: To provide the trainee with skills and knowledge to undertake specialist assessment and management of patients with haematuria and / or proteinuria.

KNOWLEDGE

- Pathophysiology of visible and non-visible haematuria
- Causes of haematuria and define the relationship to systemic diseases
- Pathophysiology of proteinuria and the nephrotic syndrome
- The causes of proteinuria and define the relationship to systemic diseases
- Risk of extrarenal complications of the nephrotic syndrome
- The range of treatment options (including potential adverse effects) available for management of proteinuria and associated extrarenal complications
- Indications for kidney biopsy in investigation of haematuria, associated risks, likely prognosis and requirement for long term review

SKILLS

- Formulating a differential diagnosis, appropriate plan of investigation and management for a patient with haematuria
- Recognising the indications for kidney biopsy in investigation of haematuria and discussing the associated risks, likely prognosis and requirement for long term review
- Formulating a differential diagnosis, appropriate plan of investigation and management for a patient with asymptomatic proteinuria, symptomatic proteinuria or nephrotic syndrome
- Assessing the severity of proteinuria and the risk of extra-renal complications
- Recognising the indication for kidney biopsy in investigation of proteinuria and discussing the associated risks, likely prognosis and requirement for long term review

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- AMNCH Tallaght Study Day
Primary glomerular diseases

Objective: To provide the trainee with skills and knowledge to assess, diagnose and treat patients with primary glomerulonephritis, manage the complications of the diseases and their treatment, and both the systemic and local kidney manifestations.

KNOWLEDGE

- The various types of primary glomerulonephritis, aetiology, pathology and clinical manifestations:
  - Minimal change disease
  - Focal and segmental glomerulosclerosis
  - Membranous nephropathy
  - Membranoproliferative glomerulonephritis
  - IgA Nephropathy
- The natural history and prognosis for the primary glomerulonephritides
- The investigation of a patient with glomerulonephritis, both at time of presentation and during long term follow-up (including role of kidney biopsy)
- The available management strategies (both specific and non-specific) including immunosuppression and is aware of recent clinical trials

SKILLS

- Clinically assessment of patients with primary glomerulonephritis
- Investigating patients appropriately including laboratory tests, imaging and biopsy
- Interpreting the results of laboratory investigations and kidney biopsy findings
- Making appropriate decisions about urgency of treatment
- Determining the place for immunosuppression, balances risks and benefits, and monitors long term use

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- AMNCH Tallaght Study Day
Systemic Diseases with Secondary Glomerular Involvement

Objective: To provide the trainee with skills and knowledge to assess, diagnose and treat patients with systemic diseases with secondary glomerulonephritis, manage the complications of the diseases and their treatment, and both the systemic and local kidney manifestations.

KNOWLEDGE

- The pathophysiology of systemic disease causing glomerulonephritis especially vasculitis and SLE, viral and other infections and thrombotic microangiopathies
- The various types of secondary glomerulonephritis, etiology, pathology and clinical manifestations:
  - Lupus Nephritis
  - Anti-GBM Disease and Goodpasture’s Disease
  - Systemic Amyloidosis and Non-amyloid Deposition Diseases
  - Antineutrophil Cytoplasmic Autoantibodies–Small Vessel Vasculitis
  - Cryoglobulinaemia
  - Scleroderma and thrombotic microangiopathies
- The natural history and prognosis for the different glomerulonephritides
- The investigation of a patient with glomerulonephritis, both at time of presentation and during long term follow-up (including role of kidney biopsy)
- Available management strategies (both specific and non-specific) including immunosuppression and is aware of recent clinical trials
- Recognising the occurrence of rare diseases such as fibrillary GN, scleroderma, cryoglobulinaemia, and knowing where to find more information

SKILLS

- Clinically assessing patients with glomerulonephritis with systemic involvement
- Investigating patients appropriately with laboratory tests, imaging and kidney biopsy
- Interpreting the results of laboratory investigations and kidney biopsy findings
- Making appropriate decisions about urgency of treatment
- Determining the place for immunosuppression, balances risks and benefits, and monitors long term use

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- AMNCH Tallaght Study Day
Fabry’s, Alports, Thin BM , polycystic kidney disease

Objective: To provide the trainee with skills and knowledge to assess, diagnose and treat patients with genetic and other rare diseases and advise on inheritance.

KNOWLEDGE

- The pathophysiology and genetics of APKD, Alport’s disease, reflux nephropathy, inherited tubular disorders, metabolic disorders such as oxalosis, Fabry’s disease and thin membrane nephropathy
- Investigations needed in patients with cystic kidney diseases and other inherited diseases
- The natural history and prognosis of these diseases
- Available treatments and outlines their appropriate use
- The patterns of inheritance of genetic conditions and recognises indications for screening

SKILLS

- Assessing patients with inherited diseases, taking a full history including familial elements, and demonstrating awareness of any extrarenal systemic manifestations
- Initiating investigations including laboratory tests, imaging and kidney biopsy (when appropriate)
- Interpreting the results of investigations and initiating specific treatment appropriately
- Explaining the long term and progressive nature of these diseases to patients and acts to minimise complications
- Determining when screening is required and interpreting results of screening test.

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- AMNCH Tallaght Study Day
Tubulointerstitial nephritis

Objective: To provide the trainee with skills and knowledge to assess, diagnose and treat patients with interstitial nephritis or tubulo-interstitial disease, manage the complications of the diseases and their treatment, and both the systemic and local kidney manifestations.

KNOWLEDGE

- The pathophysiology of interstitial nephritis and tubulo-interstitial disease, their causes and links with systemic diseases
- Investigations needed in patients with interstitial nephritis
- The natural history and prognosis of interstitial nephritis
- The management strategies for treatment and especially the place for steroids or other immunosuppression

SKILLS

- Clinically assessing patients with interstitial nephritis, and taking a full drug and environmental history.
- Investigating patients appropriately including use of laboratory tests, imaging and kidney biopsy
- Interpreting the results of appropriate laboratory investigations and kidney biopsy findings
- Making decisions about the urgency of treatment and the place of steroids or other immunosuppression

ASSESSMENT & LEARNING METHODS

- CBD, Mini-CEx, NCA, ASN-ITE
- AMNCH Tallaght Study Day
Section 9: Procedures

Kidney Biopsy (native and transplant)

Objective: To ensure that the trainee is familiar with the skills necessary to perform native and transplant kidney biopsy.

**KNOWLEDGE**
- Indications for a kidney biopsy
- The anatomy of the native kidneys
- Contraindications to performing a kidney biopsy
- Potential complications of a kidney biopsy

**SKILLS**
- Minimising and managing the complications of kidney biopsy
- Interpreting the kidney biopsy findings with the assistance of a Histopathologist
- Discussing the indication, perceived benefits and potential risks of the procedure with a patient or relative in a manner that facilitates informed consent
- Discussing biopsy findings with a patient to enable shared decision making regarding treatment options
- Utilising ultrasound to localize kidneys and using ultrasound guidance to assist in kidney biopsy (not mandatory)
- Competent performance of a native kidney biopsy (not mandatory)

**ASSESSMENT & LEARNING METHODS**
- Direct Observation of Procedural Skills (DOPS)
Ultrasound Scanning (Native and Transplant Kidneys)

Objective: The trainee will be proficient at carrying out and interpreting ultrasound scanning of native and transplant kidneys to facilitate kidney biopsy and identify anatomy and patency of central veins to facilitate central venous catheter placement.

KNOWLEDGE

- The anatomy of both native and transplant kidneys
- The anatomy of the central veins

SKILLS

- Using ultrasound to localise native and transplant kidneys for the purpose of kidney biopsy
- Localising central veins and assessing their suitability for percutaneous venous access
- Using bedside ultrasound to assess patients with AKI e.g. to rule out obstruction and kidney cortical thickness

ASSESSMENT & LEARNING METHODS

- DOPS
- Study Day
- Recommended: Ultrasound course to include the following:
  - neck and groin veins
  - native kidney
  - transplant kidney
Insertion of Temporary Haemodialysis Catheters

Objective: To insert and manage temporary haemodialysis catheters.

KNOWLEDGE

- The anatomy of the central venous system in the upper thorax, neck and femoral veins
- Indications for insertion of temporary haemodialysis catheters and the relative merits and problems associated with each site of insertion
- Complications associated with temporary haemodialysis catheter insertion, the methods of minimising these complications and their treatment should they occur
- Treatment of catheter related sepsis and blocked catheters
- Anatomical method of insertion of temporary haemodialysis catheters in all central vein positions.

SKILLS

- Discuss the indications, benefits and adverse events of the procedure to patients, relatives and carers in a manner that will allow informed consent
- Insertion of temporary haemodialysis catheters using the Seldinger technique and ultrasound guidance for bilateral internal jugular and femoral veins.
- Insertion of temporary haemodialysis catheters in all central vein positions
- Explaining the use of the catheter and its management to the patient, relatives and carers

ASSESSMENT & LEARNING METHODS

- DOPS
Insertion of Peritoneal Dialysis Catheters (not mandatory)

**Objective:** The trainee will understand the different methods of inserting PD catheters. The trainee will be proficient at carrying out the insertion of PD catheters by the percutaneous method.

**KNOWLEDGE**
- Indications for insertion of PD catheters.
- Different medical and surgical techniques for insertion of PD catheters including complications and means to minimise these.
- Anatomy of the anterior abdominal wall, abdominal cavity and peritoneum, the different types of catheters and their use.
- The role of nurses in the management of a catheter after its insertion

**SKILLS**
- Assessing a patient’s suitability for insertion of a PD catheter by different techniques
- Discussing the indications, benefits and adverse events of the procedure to patients, relatives and carers in a manner that will allow informed consent
- Insertion of PD catheters using the percutaneous approach
- Managing acute complications following catheter insertion – catheter malposition, catheter related sepsis and occluded catheter

**ASSESSMENT & LEARNING METHODS**
- DOPS
Documentation of Minimum Requirements for Training

- These are the minimum number of cases you are asked to document as part of your training. It is recommended you seek opportunities to attain a higher level of exposure as part of your self-directed learning and development of expertise.
- You should expect the demands of your post to exceed the minimum required number of cases documented for training.
- If you are having difficulty meeting a particular requirement, please contact your specialty coordinator.
